

**APPLICATION #10
Large Stadium Configuration**

This configuration provides two remote control points, in the Open and Booth locations, via rack mount RC5 key switch devices. These may be non-keyed if preferred. The RCDM3 coordinates and allows control from those two locations.

Each of the CQ-PD1-4 power modules has four 20 amp circuits and four sequence events. Each will turn on in the sequence in which they are connected with the RJ45 signal cable. They will turn off in exact reverse order.
